Math Pathways are designed to guide students into the most appropriate math course depending on their meta-major selected at MACC or their intended transfer major. Degree maps direct students into their math sequence early in their academic program and outline a plan of study for required developmental coursework. Fundamentals of Math is the foundational support course for all three math pathways for students placing at this level. Co-requisite courses in Elementary Statistics and Quantitative Reasoning provide additional academic support for students who are not optimally prepared for the college-level course, while Intermediate Algebra provides intensive instruction for students preparing to enter the Calculus sequence.

Initial math placement is determined by a placement assessment process. Please see [www.macc.edu/testing](http://www.macc.edu/testing) for information regarding placement.

- Course meets math requirement for Associate of Arts degree
- Students should consult with an MACC advisor as well as their receiving institution to ensure the appropriate math pathway is selected.
