How to get MACC/Houndmail to your iPhone

1. Select your settings app
2. Choose your Mail app
3. Select Add Account
4. Click on Other

5. Select Add Mail Account

6. Create your New Account
7. **Incoming Mail Settings**

Choose IMAP, it shares folders and everything between webmail and your phone. If you choose POP, it will only access messages in your houndmail inbox. You will not be able to send messages with this protocol.

8. If your phone ask for Port number to be added use the following (the iPhone does not ask for this, it automatically adds this):

IMAP Port: 143
POP Port: 110

9. **Outgoing Mail settings**

The Host Name will be macc.edu for faculty/staff and houndmail.macc.edu for students.

**Username and Password**, it says they are optional but they are required.

10. SSL needs to be in the off position. On the iPhone you are asked if you want to try setting up your account without SSL. You will choose Yes.

11. This screen will appear again and say “Yes” again. This may take a few minutes to activate.
12. On the iPhone, leave Mail on, turn Notes off (this saves notes on server space).

13. This screen shows that you have successfully added your MACC mail.

14. Go to your Mail App and then open your macc/houndmail here.
