

Associate of Science in Health Sciences

When students complete an Associate of Science (AS) in Health Sciences degree at MACC they will be able to:

1. Graduates will define and describe foundational concepts in the biological, chemical, and social sciences necessary to understand human health and disease.
2. Graduates will analyze and apply scientific reasoning and quantitative skills to interpret health-related data and solve problems in the context of human health.
3. Graduates will explain the structure and function of the human body and its relevance to health, wellness, and disease processes.
4. Graduates will develop professional knowledge and skills essential for success in health science fields, including effective communication, ethical decision-making, teamwork, and time management.

This is our program promise.
